Normal: If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

Important Safety Information-1

To prevent damage to property and injury to the user, the icons shown below will be used to warn of varying levels of danger. Every indication is critical to the safe operation of the water heater and must be understood and observed. Potential dangers from accidents during installation and use are divided into the following three categories. Closely observe these warnings; they are critical to your safety.

**Icons warning of risk level**

**Danger**

If you detect a gas leak:
1. Do not try to light any appliance
2. Do not touch any electrical switch; do not use any phone in your building.
3. Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
4. If you cannot reach your gas supplier, call the fire department.

**Warning**

Do not use the water heater if the exhaust pipe is displaced, has holes, or is corroded.

If you detect abnormal combustion or abnormal odors, or during an earthquake, tornado or fire:
1. Turn off the hot water supply
2. Turn off the power to the water heater
3. Turn off gas and water at the main
4. Consult the nearest Noritz agent

Check the temperature of the running hot water before entering the shower.

Check the temperature before stepping into the bath tub.

(Continued)
Important Safety Information - 2

(Continued)

- Do not turn off the water heater or change the water temperature while someone is bathing.

- Do not place combustibles such as laundry, newspapers, oils etc. near the heater or the exhaust vent terminal.

- Do not allow small children to play unsupervised in the bathroom.

- Do not allow small children to bathe unsupervised.

- Consult the nearest Noritz agent if the water heater location needs to be changed.

- Contact a qualified service technician for any necessary repairs, service or maintenance.

- Contact Noritz before using with a solar pre-heater.

[When installing indoors] Check the air supply vent for dust or obstructions.

Be sure the gas/power supplied matches the gas on the rating plate.

- Leave the proper clearance between the water heater and nearby objects (trees, timber, boxes with flammable materials etc.).

  Min. 3" from vent pipe
  Left side: Min. 2"
  Right side: Min. 2"
  Front: Sug. 24"*

  * Indicates suggested clearances for maintenance.

- Do not place or use a spray can near the heater or the exhaust vent terminal.

- Do not use combustible chemicals such as oil, gasoline, benzene etc. in the vicinity of the heater or the exhaust vent terminal.

- Do not place combustibles such as laundry, newspapers, oils etc. near the heater or the exhaust vent terminal.

Exhaust vent terminal (indoor installation)

Unit

For Natural Gas

- Check the air supply vent for dust or obstructions.

- Be sure the gas/power supplied matches the gas on the rating plate.

- Do not use combustible chemicals such as oil, gasoline, benzene etc. in the vicinity of the heater or the exhaust vent terminal.

- Do not place combustibles such as laundry, newspapers, oils etc. near the heater or the exhaust vent terminal.

- Do not install indoors.

- Consult the nearest Noritz agent if the water heater location needs to be changed.

- Contact a qualified service technician for any necessary repairs, service or maintenance.

- Contact Noritz before using with a solar pre-heater.

[When installing indoors] Check the air supply vent for dust or obstructions.

Be sure the gas/power supplied matches the gas on the rating plate.
Be sure to electrically ground the unit.

Do not touch the power cord with wet hands.

Keep power cord free of dust.

Do not use a broken or modified power cord. Do not bind, bend or stretch power cords. Do not scratch, modify, or subject them to impact or force.

Do not use the water heater for other than hot water supply, shower and bath.

Do not touch the exhaust vent pipe during or immediately after operation of the water heater.

Do not use hair spray or spray detergent in the vicinity of the heater.

If this unit will be installed in a salon or other location where hair spray or aerosols will be used, locate the unit in a separate area that is supplied with fresh air from outdoors.

Do not install in locations where excessive dust or debris will be in the air.
Important Safety Information-3

Remark

Do not drink water that has been inside the unit for an extended period of time. Do not drink the first use of hot water from the unit in the morning.

Clean the filter on the water inlet as frequently as required by the quality of your local water.

Keep the area around the unit clean. If boxes, weeds, cobwebs, cockroaches etc. are in the vicinity of the unit, damage or fire can result.

Do not install the equipment where the exhaust will blow on walls or windows.

Treat hard, acidic or otherwise impure supply water with approved methods to ensure full warranty coverage.

Problems resulting from scale formation are not covered by the warranty.

Check ignition during use and extinction after use.

Do not run water through the unit when unit is not on.

When discharging hot water, make sure the unit is ON. If water is run through the unit with the unit OFF, water may condense inside the unit and cause incomplete combustion or damage to the internal electrical components.

For single-handle fixtures or valves, discharge water setting the handle completely to the water side.

This unit is only approved for installation up to 4500 ft. above sea level.

For installations at higher elevations, contact Noritz America for Instructions.

Do not disassemble the remote controller.

Do not use benzene, oil or fat detergents to clean the remote controller. This may cause deformation.

Do not get the remote controller wet. Although it is water resistant, too much water can cause damage.

Do not splash water on the remote controller. Do not expose the remote controller to steam. Do not locate the remote controller near stoves or ovens, this may cause damage or failure.

Preventing damage from freezing (☞p.17)

Damage can occur from frozen water within the device and pipes even in warm environments. Be sure to read below for appropriate measures. Repairs for damage caused by freezing are not covered by the warranty.

Take necessary measures to prevent freezing of water and leakage of gas when leaving the unit unused for long periods of time. (☞p.18)

If it is snowing, check the air inlet, exhaust gas vent and exhaust vent terminal for blockage.

Do not use parts other than those specified for this equipment.
General Parts

Main Unit

Indoor/Outdoor Wall Mounted, Power Vented Model

* The above illustration shows an example of installation. The exact installation configuration may be slightly different.
Remote Controller (RC-7646M-2)

**Display**

(See next page)

**Setting Buttons**

For setting the hot water temperature, the flow meter alarm, and other settings.

**Power On/Off Button**

For turning the heater on and off.

**Flow Meter Alarm Set Button**

For setting the flow meter alarm. (See p.14 and 15)

* Before use, remove the protective sheet from the remote controller surface.

* The unit has been shipped from the factory with the remote control set at 110°F.
Display

The illustration below shows the remote controller display. What is actually displayed depends on how the water heater is set.

**Burner On Indicator**

When this indicator is lit, the hot water temperature can be set.  (☞ p.13)

**Priority Indicator**

When this indicator is lit, the hot water temperature can be set.  (☞ p.13)

**Temperature Setting**

(Ex.: 110°F)

**Flow Meter Setting**

The display will flash after hitting the flow meter alarm set button.  (☞ p.15)

**Error Code**

A number will flash if a failure occurs.  (☞ p.24)
Initial Operation

Before the first use of your water heater, make the following preparations.

Follow steps 1 through 4.

1. Open the water supply valve.
   - CLOSED ➔ OPEN

2. Open a hot water fixture to confirm that water is available, and then close the fixture again.
   - Hot water fixture

3. Open the gas supply valve.

4. Turn on the power.
The remote controller will emit a sound when any button is pushed. This sound can be muted if it is desired.

* Initial factory setting is with sound

How to Use (Using the remote controller)

Muting the Remote Controller

1

With the remote controller off, hold the Power On/Off Button for five seconds.

![Diagram showing muting the remote controller]
How to Use (Using the remote controller)

Setting and Using the Water Heater

1. Press the Power On/Off Button.

(Starting with the Power Off)

The temperature will be displayed on the remote control thermostat.

Previous set temperature
(Ex.: 110°F)

2
1

Caution

Temperatures above 125 °F can scald.

- Check the water temperature by hand before bathing or showering.

- When setting the unit to 125°F or higher, the temperature display will flash for 10 seconds as a high temperature warning.

- Take caution when using the unit again after setting to 125°F or higher. Always check the set temperature before use.

- Do not allow anyone to change the water temperature while hot water is running.

To prevent scalding:

High Temperature

Remote Controller Display

Flashes for 10 sec

125°F

What's the setting?

125°F?!
2 Set temperature. (Always check the temperature setting before use.)

Hot

Cold

3 Turn on hot water.

Run!!

Stop!

4 Turn off the hot water.

Check the indicator lights.

Water temperature

On

Off

The temperature settings below are examples. The temperature setting necessary depends on the usage, the length of piping and the time of year.

<table>
<thead>
<tr>
<th>100</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

*Initial factory setting is 110°F

If fixtures incorporate mixing valves, set the temperature higher than usual.

* For most residential applications, the recommended setting temperature is 120°F or less.
For applications that occasionally require a higher temperature setting, locate the remote controller in a convenient location (see p.61).

* Consult local codes for minimum operating temperatures.
How to Use (Using the remote controller)

Flow Meter Alarm

1. Plug the bath drain.

Preparation

2. Press the Power On/Off Button

The temperature will be displayed on the remote control thermostat.

3. Set temperature.

(Always check temperature setting before use)

(Starting with the power off)

1. Press the Power On/Off Button

The temperature will be displayed on the remote control thermostat.

Previous set temperature (example: 110°F)

2. Set temperature.

Check the indicator lights.

Hot
Cold

Water temperature

110°F

0°F
An alarm will sound for ten seconds when the flow reaches the set level.

The water will continue to run unless it is manually turned off.

**Water Temperature**

The temperatures settings below are only examples. The temperature setting necessary will depend on the usage, the length of piping and the time of year.

<table>
<thead>
<tr>
<th>°F</th>
<th>Water Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>Warm</td>
</tr>
<tr>
<td>105</td>
<td>Warmer</td>
</tr>
<tr>
<td>110</td>
<td>Hot</td>
</tr>
<tr>
<td>115</td>
<td></td>
</tr>
<tr>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>

* Initial factory setting: 110°F

---

To set the flow meter alarm:

3 **Adjust flow meter alarm setting.**

Press the flow meter alarm set button (the setting will flash on the display) and adjust with the setting buttons.

- Increase
- Decrease

Choose the flow meter alarm setting from the following options: 10 - 60 (In 5 gallon intervals), 70 - 100 (In 10 gallon intervals), or 990 gallons.

- **Note:** The alarm will not sound if it is set for 990 gal.

Flow meter setting will be flashing (ex. 45 gal.)
- The level can only be adjusted while the indicator is flashing.
- After ten seconds, the remote will again display the temperature.

If the flow meter alarm is being used to indicate when a tub is full:
- If any hot water is being used besides what is going into the tub, the alarm will sound before the tub is full.
- If there was water in the tub before the fill began, or if the water is not shut off manually when the alarm sounds, the tub may overflow.
- If there was water in the tub before the fill began, the temperature in the tub after it is full may be different from the temperature setting.

4 **Turn on hot water.**

5 **Turn off the hot water when the alarm sounds.**

The alarm will sound when the set level has been reached. Stop the water.

**Note:** The alarm will not sound if it is set for 990 gal.

---

* The level can only be adjusted while the indicator is flashing.
* After ten seconds, the remote will again display the temperature.

---

Off: 110°F

---

On: 105°F
How to Use (Not using the remote controller)

Setting and Using the Water Heater

The factory temperature setting is 120°F (fixed). Mix with cold water with a mixing valve or at the fixture for desired temperature.

1 Check that electrical power is connected.

Tightly!

2 Turn on hot water.

scalding.

3 Mix for desired temperature.

4 Turn off the hot water.

The electrical power does not need to be disconnected between uses.

If you want to the temperature to be changed to 130°F or 140°F, contact the installer or Noritz.

WARNING

To prevent scalding.

Check the temperature of the running hot water before using. Temperatures above 125°F can scald instantly.
Preventing Damage from Freezing-1

Remarks
* Damage can occur from frozen water within the device and pipes even in warm environments. Be sure to read below for appropriate measures.
* Repairs for damage caused by freezing are not covered by the warranty.

Freezing is prevented within the device automatically by the freeze-prevention heater

Freezing cannot be prevented when the power plug is unplugged. Do not remove the power plug from the wall outlet.
(Freezing will be prevented regardless of whether the operation switch is ON or OFF.)

* The freeze prevention heaters will not prevent the plumbing external to the unit from freezing.
Protect this plumbing with insulation, heat tape or electric heaters, solenoids, or pipe covers.
If there remains a freezing danger, contact the nearest Noritz agent.

Take the measures below for extremely cold temperatures*. <Only using the remote controller>
(Outside temperature including wind chill factor less than 5°F)

This method can protect not only to the heater, but also to the water supply, water piping and mixing valves.
1. Turn off the power.
2. Close the gas supply valve.
3. Open a hot water fixture, and keep a small stream of hot water running. (400 cc/minute or about 1/4" thick.)
   * If there is a mixing valve, set it to the highest level.
   * When linking multiple units, discharge water equivalent to 400 cc/minute per unit.
4. The flow may become unstable from time to time. Check the flow 30 minutes later.
   * In general, it is not advisable to run water through the unit when it is OFF (see p. 6), but in this case freeze prevention is more important.

* Remember to set mixing valves and fixtures to their original levels before using the unit again to prevent scalding.
* If there is still a chance that the unit will freeze, drain the unit as on the next page.

If water will not flow because it is frozen

1. Close the gas and water valves.
2. Turn off the power button.
3. Open the water supply valve from time to time to check whether water is running.
4. When the water is flowing again, check for water leaks from the equipment and piping before using.

If the heater or the piping is frozen, do not use the heater or it may get damaged.
If the water heater will not be used for a long period of time, Drain the water.

Drain the water as follows:

1. Close the gas valve.

2. (1) Turn the power on. <Using the remote controller>
   (2) Turn and leave open the hot-water tap for more than 1 minute and close.
   * If multiple units are being used, drain one minute for each unit.
   * An 11 Error Code may appear on the remote controller.
     This is not a malfunction of the unit. Do not turn Power ON/OFF Button OFF.

3. Close the water supply valve, disconnect the electrical power supplied to the unit.

4. Fully open all hot water fixtures.

5. Open all drain plugs and drain the water out of the unit.

6. When the water is completely drained, replace all drain plugs and close the hot water fixtures.

**Caution**

To avoid burns, wait until the equipment cools down before draining the water. The appliance will remain hot after it is turned off.

Drain water into a bucket to prevent water damage.

**Turning the Unit Back On**

1. Check that all drain plugs are inserted.
2. Check that all hot water fixtures are closed.
3. Follow the procedure on p.10 “Initial operation”, steps 1 through 4.
Regular Maintenance-1

Periodic Inspection

Caution
To avoid burns, wait until the equipment cools down before draining the water. The appliance will remain hot after it is turned off.

Check
For laundry, newspaper, timber, oil, spray cans and other combustible materials. (☞ p.4 )

Check
For abnormal sounds during operation.

Check
For abnormalities in external appearance, discoloration or flaws.

Check
For proper operation of pressure relief valve.

Check
For water leaks from the equipment and piping.

Check
For dust and soot in the exhaust vent or exhaust vent terminal.

Check
For dust or debris in the air inlet.

Periodic Maintenance

Equipment
Wipe the outside surface with a wet cloth, then dry the surface. Use a neutral detergent to clean any stains.

Remote Controller
Wipe the surface with a wet cloth.

- Do not use benzene, oil or fatty detergents to clean the remote controller; deformation may occur.
- The remote controller is water resistant but not water proof. Keep it as dry as possible.
Regular Maintenance-2

Periodic Maintenance

Water Drain Valve (with Water Filter)

If the water drain valve (with water filter) is covered with debris, the hot water may not run smoothly, or the unit may put out cold water. Check and clean the filter as explained below.

* To avoid burns, wait until the equipment cools down before draining the water.

The appliance will remain hot after it is turned off.

1. Close the water supply valve.
2. Open all hot water fixtures.
3. With a bucket ready, remove the inlet and outlet drain plugs (about 0.2 gal. will drain out)
4. Take the water drain valve (with water filter) out of the inlet. (See illustration to right).
5. Clean the water drain valve (with water filter) with a brush under running water.
6. Replace the water drain valve (with water filter) and close the drain plugs. (Take care not to lose the packing.)
7. Close all hot water fixtures.
8. Open the water supply valve and check that water does not leak from the drain plugs or water drain valve (with water filter).

Optional Maintenance

Isolator Exp (IK-WV-1)

* Isolator Exp kits may be purchased as an accessory from Noritz (Part #IK-WV-1). They allow for full diagnostic testing and easy flushing of the system.
* The kit includes two full port isolation valves and a pressure relief valve for the hot side. Contact Noritz for more information.
# Troubleshooting-1

## Initial Operation

| Unit does not attempt to ignite when water is running. | • Is water running?  
• Check for reversed plumbing or crossed pipes.  
• Check the water drain valve filter. (p.20) |
| --- | --- |
| Unit attempts to ignite but fails | • Reset unit and try again. There may be air in the gas line.  
• Have a professional check the gas supply pressure. |

## Temperature

| Hot water is not available when a fixture is opened. | • Are the gas and water supply valves fully open?  
• Is the water supply cut off?  
• Is the hot water fixture sufficiently open?  
• Is the gas being cut off by the gas meter?  
(Can other gas devices such as stoves be used?)  
(For LP) Is there enough gas in the tank?  
(Can other gas devices such as stoves be used?)  
• Is the water drain valve filter clogged? (p.20)  
• Is the power button turned on?  |
| --- | --- |
| No water is available when a fixture is opened. | • Is the water supply cut off?  
• Is the heater frozen? |
| The hot water is not the correct temperature. | • Is the hot water fixture sufficiently open? |
| Water takes time to become hot when turning the hot water fixture. | • Have you allowed enough time for the cold water in the pipes to drain out? |
| The water is too hot. | • Are the gas and water supply valves fully open?  
• (Using the remote controller) Is the water temperature setting appropriate? (p.12 and p.13)  
• If the water supply temperature is high, it is possible for the temperature to be higher than the temperature set on the remote controller.  
• If only a small amount of hot water is demanded, it is possible for the temperature to be higher than the temperature set on the remote controller. |
| The water is not hot enough. | • Are the gas and water supply valves fully open?  
• (Using the remote controller) Is the water temperature setting appropriate? (p.12 and p.13)  
• If the amount of hot water required is very high, it is possible for the temperature to be lower than the temperature set on the remote controller.  
Decrease the amount of hot water passing through the unit and the temperature should stabilize. |
## Troubleshooting-2

### Temperature

| The water is cold when only a single fixture is open. | • The unit will not heat the water if the flow rate is less than 0.5 gallons per minute. Open the fixture more or open other fixtures so that a greater flow passes through the unit, and the unit should begin heating again. |
| Fluctuations in hot water temperatures. | • Set water temperature at 115°F to 120°F. This will allow you to use a higher flow of hot water thus meeting the minimum flow requirement of 0.5 gpm.  
• Clean the water filter of any debris (☞p.20) |

### Amount of Hot Water

| The amount of hot water at a certain fixture is not constant. | • When hot water is demanded at other fixtures, the amount available may be reduced. The maximum flow available from this unit is a 45°F temp. rise. for N-069M=6.9 GPM / for N-063S=6.3 GPM  
• Pressure fluctuations and other plumbing conditions can cause the temperature and pressure at a fixture to be unstable, but it should stabilize after a short time.  
• There are some types of hot water taps that discharges large volumes of hot water at first but stabilize after time.  
• To keep the temperature stable, the heater limits the amount of water that can flow through it to a small amount initially, but the amount increases over time. |
| The amount of hot water in the tub is less/more than the set amount. | • When hot water is used for other fixtures while filling the bath tub, the tub will not fill as much.  
• If there is water in the tub already, or when filling is stopped and restarted, the tub will fill more. |
| The flow meter alarm does not sound even when filled to the set amount. | • The flow meter alarm is set to sound when hot water is continuously discharged for the set volume of water. If mixing valves are used, or if cold water is mixed with hot water at the fixture, the tub will fill more than the setting of the flow meter alarm. |
| Amount of hot water available has decreased over time. | • Is the water filter clogged? (☞p.20) |
### Remote Controller

<table>
<thead>
<tr>
<th>The light on the power button does not come on.</th>
</tr>
</thead>
</table>
| • Has there been a power failure?  
  • Is the power connected properly? |

<table>
<thead>
<tr>
<th>The water temperature changes after a power failure or when the power is disconnected.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The temperature setting and the flow meter alarm setting may both need to be reset after a power outage.</td>
</tr>
</tbody>
</table>

### Sounds

| The fan can be heard after operation is stopped.  
  A motor can be heard when turning the unit ON or OFF, when opening or closing a fixture, or after the unit has been running for a while. |
<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• These noises indicate the proper operation of devices which are designed to let the unit reignite more quickly, and ensure the water temperature is stable.</td>
</tr>
</tbody>
</table>

### Other

<table>
<thead>
<tr>
<th>The Heater stops burning during operation.</th>
</tr>
</thead>
</table>
| • Are the gas and water supply valves fully open?  
  • Is the water supply cut off?  
  • Is the hot water fixture sufficiently open?  
  • Is the gas being cut off by the gas meter?

| The water appears blue  
The bath tub/wash-basin has turned blue |
<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Coloration to a blue color may be noticed from small traces of copper ion contained in the water and fat (furring). However, there are not problems concerning health. Coloration of the bath tub/wash-basin can be prevented by cleaning frequently.</td>
</tr>
</tbody>
</table>
Troubleshooting-3

Check for an Error Code or Flashing Light on the Unit

[Error displays on the remote controller]

If there is a problem with the unit, a numerical error code will flash on the remote controller. If this occurs, take appropriate measures as listed below.

When an error code appears, the display and the operation light will flash together.

<table>
<thead>
<tr>
<th>Error Code</th>

</tbody>
</table>

[Error displays on the lamp]

If there is a problem with the unit, a lamp will flash on the front of the unit. If this occurs, take appropriate measures as listed below.

<table>
<thead>
<tr>
<th>Lamp</th>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>Unit abnormality</td>
<td>Check whether the gas valve is open. Close the hot water fixture, and then open it again. If the lamp does not begin flashing again, the problem is solved.</td>
</tr>
<tr>
<td>OFF</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Contact our sales agent if:
- Any other error code appears.
- An error code is indicated again after the above actions were followed.
- There are any other questions.
Follow-up Service

Requesting Service
First follow the instructions in the troubleshooting section (p.21 to p.24). If the error is not corrected, contact our sales agent.

We will need to know:
- **The Model** ................. (check the rating plate)
  *See p.4 for the location of the label
- **Date of purchase** ..... (see the warranty)
- **Details of problem** ... (flashing error codes, etc., in much detail as possible)
- **Your name, address, and telephone number**
- **Desired date of visit**

* A request for service may be rejected if the water heater is installed in a location where working on the unit may be dangerous. Contact a plumber.

Warranty

A warranty registration card is included separately.
Be sure that the plumber, date of purchase and other necessary items are filled in.
Read the content carefully, and keep the warranty card in a safe place.

For repairs after the warranty period, there will be a charge on any service, and service will only be performed if the unit is deemed repairable.

Period of Time for Stocking Repair Parts

Noritz will stock repair and maintenance parts for this unit for a minimum of seven years after production has ceased.

Reinstallation

If you want to reinstall the appliance at a different location, confirm that the gas and power supply indicated on the rating plate are available at the new location. If you are not sure, consult the local utility company.

If you move to a region that uses a different type of gas, conversion and adjustment of the appliance will be necessary. This work must be performed by Noritz and will be charged for even during the warranty period.

Potential dangers from accidents during installation and use are divided into the following three categories. Closely observe these warnings, they are critical to your safety.

- **Danger**: Danger of serious injury or even death as well as danger of fire when the product is misused by ignoring this symbol.
- **Warning**: Possibility of serious injury or even death as well as possibility of fire when the product is misused by ignoring this symbol.
- **Caution**: Possibility of bodily injury or damage to property when the product is misused by ignoring this symbol.

**Requests to Installers**

- **Caution**: In order to use the water heater safely, read this installation manual carefully, and follow the installation instructions.
  - Failures and damage caused by erroneous work or work not as instructed in this manual are not covered by the warranty.
  - Check that the installation was done properly in accordance with this Installation Manual upon completion.
  - After completion of installation, be sure to hand the Operation Manual (with warranty) to the customer upon filling in all of the required items.

Installation must conform with local codes, or in the absence of local codes, the National Fuel Gas Code, ANSI Z223.1/NFPA 54.
# 1. Included Accessories

The following accessories are included with the unit. Check for any missing items before starting installation.

3. Quick Connect Multi System Installation

- The Quick Connect Multi System allows the installation of two units together utilizing only the Quick Connect Cord.

The Quick Connect Cord is 6 ft. long. Install the units 2-18” apart from each other to ensure the cord will be able to reach between the units. (See Typical Plumbing diagram). (If the distance between the two units is too great, not only will the cord not be able to reach, but the water temperature may also become unstable because of the difference in pipe length between the two units).

**System Diagram**

- Insulate the hot water piping to prevent heat loss. Insulate and apply heating materials to the cold water supply piping to prevent heat loss and freezing of pipes when exposed to excessively cold temperatures.

**Typical Plumbing**

- Make this distance as short as possible. * The hot water temperature will become unstable as the pipe length increases.

- Leave enough clearance around the plumbing to apply insulation. It will be necessary to add bends to the piping to ensure that this clearance is available.

- Size the piping to allow for the maximum flow rates of the units.

- When connecting two units, use only a single remote controller.

Note: Connect the remote controller to only one of the units.

---

*When connecting two units, use only a single remote controller.*
5. Choosing Installation Site

* Locate the appliance in an area where leakage from the unit or connections will not result in damage to the area adjacent to the appliance or to the lower floors of the structure. When such locations cannot be avoided, it is recommended that a suitable drain pan, adequately drained, be installed under the appliance. The pan must not restrict combustion air flow.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Install the water heater in a location where it is free from obstacles and stagnant air.</td>
</tr>
<tr>
<td>Consult with the customer concerning the location of installation.</td>
</tr>
<tr>
<td>Do not install the water heater near staircases or emergency exits.</td>
</tr>
<tr>
<td>Avoid places where fires are common, such as those where gasoline, benzene and adhesives are handled, or places in which corrosive gases (ammonia, chlorine, sulfur, ethylene compounds, acids) are present. Using the incorrect voltage may result in fire or cracking.</td>
</tr>
</tbody>
</table>
• Install the exhaust vent so that there are no obstacles around the termination and so that exhaust can’t accumulate. Do not enclose the termination with corrugated metal or other materials.

• Do not install the water heater where the exhaust will blow on outer walls or material not resistant to heat. Also consider the surrounding trees and animals.
  The heat and moisture from the water heater may cause discoloration of walls and resinous materials, or corrosion of aluminum materials.

• Do not locate the vent termination directed towards a window or any other structure which has glass or wired glass facing the termination.

• Avoid installation above gas ranges or stoves.

• Avoid installation between the kitchen fan and stove. If oily fumes or a large amount of steam are present in the installation location, take measures to prevent the fumes and steam from entering in the equipment.

• Avoid installation in places where dust or debris will accumulate.
  Dust may block the air-supply opening, causing the performance of the device fan to drop and incomplete combustion to occur as a result.

• Install in a location where the exhaust gas flow will not be affected by fans or range hoods.

• Take care that noise and exhaust gas will not affect neighbors.

• Make sure that the location allows installation of the exhaust vent as specified.

• Avoid installation in places where special chemical agents (e.g., hair spray or spray detergent) are used.
  Ignition failures and malfunction may occur as a result.

• For outdoor installation, use the VC4 outdoor vent cap.
  If it is necessary to vent above the roof line in an outdoor installation, also use the base of the VC4 vent cap for rain protection.

• Avoid installation where the unit will be exposed to excessive winds.

• Before installing, make sure that the vent termination (or the vent cap in an outdoor installation) will have the proper clearances according to the National Fuel Gas Code (ANSI Z223.1).
### 6. Installation Clearances

Before installing, check for the following:
Install in accordance with relevant building and mechanical codes, as well as any local, state or national regulations.

<table>
<thead>
<tr>
<th>Item</th>
<th>Check</th>
<th>Illustration</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Required Clearances From Heater</strong></td>
<td>• Maintain the following clearance from both combustible and non-combustible materials.</td>
<td><img src="image" alt="Diagram of heater clearances" /></td>
</tr>
<tr>
<td></td>
<td>• If the unit will be installed in the vicinity of a permanent kitchen range or stove that has the possibility of generating steam that contains fats or oils, use a dividing plate or other measure to ensure that the unit is not exposed to air containing such impurities.</td>
<td><img src="image" alt="Diagram of range and water heater" /></td>
</tr>
<tr>
<td></td>
<td>• If possible, leave 8&quot; or more on either side of the unit to facilitate inspection.</td>
<td><img src="image" alt="Diagram showing space for repair/inspection" /></td>
</tr>
<tr>
<td></td>
<td>• If possible, leave 24&quot; or more in front of the unit to facilitate maintenance and service if necessary.</td>
<td><img src="image" alt="Diagram showing secured space" /></td>
</tr>
</tbody>
</table>

* The dividing plate should be of noncombustible material of a width greater than the water heater.
Clearance Requirements from Vent Terminations to Building Openings

* All clearance requirements are in accordance with ANSI Z21.10.3 and the National Fuel Gas Code, ANSI Z223.1.

<table>
<thead>

<td>![Diagram of clearances outdoors]</td>
</tr>
</tbody>
</table>

* For Installations in Canada, clearances are as follows: To windows, doors, & gravity air inlets: 36". To forced air inlets: 6'. These clearance requirements hold true for all of the above situations: Indoor, Outdoor w/vent cap.
7. Installation

Securing to the wall

- The weight of the device will be applied to the wall. If the strength of the wall is not sufficient, reinforcement must be done to prevent the transfer of vibration.
- Do not drop or apply unnecessary force to the device when installing. Internal parts may be damaged and may become highly dangerous.
- Install the unit on a vertical wall and ensure that it is level.

<table>
<thead>
<tr>
<th>Item</th>
<th>Check</th>
<th>Illustration</th>

</tr>
<tr>
<td></td>
<td>5. Hang the unit again by the first screw, and then insert and tighten the remaining four screws.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>6. Take waterproofing measures so that water does not enter the building from screws mounting the device.</td>
<td></td>
</tr>
<tr>
<td>Structure</td>
<td>• Make sure the unit is installed securely so that it will not fall or move due to vibrations or earthquakes.</td>
<td></td>
</tr>
</tbody>
</table>
8. Vent Pipe Installation (Indoor Installation Only)

**Vent Piping**
- Use only listed category III vent materials.
- Follow the vent pipe manufacturer’s installation instructions.

<table>
<thead>
<tr>
<th>Pipe diameter</th>
<th>4”</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>No. of Elbows</th>
<th>Max. Straight Vent Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>15’</td>
</tr>
<tr>
<td>2</td>
<td>27’</td>
</tr>
<tr>
<td>1</td>
<td>39’</td>
</tr>
</tbody>
</table>

- Make the vertical section of the exhaust vent as short as possible.
- Maintain the same vent pipe diameter from the heater flue to the vent termination.

**Clearances**

<table>
<thead>
<tr>
<th>Manufacturer and Product</th>
<th>Enclosed</th>
<th>Unenclosed</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Z-Flex Z-Vent</td>
<td>2SVWA04</td>
</tr>
<tr>
<td>Flex-L StaR-34</td>
<td>SRASPSA4</td>
</tr>
</tbody>
</table>

**Horizontal Vent Termination**
- Terminate at least 12” above grade or above snow line.
- Terminate at least 7” above a public walkway, 6’ from the combustion air intake of any appliance, and 3’ from any other building opening, gas utility meter, service regulator etc.
- Terminate at least 3’ above any forced air inlet within 10’, 4’ below, 4’ horizontally from or 1’ above any door, window, or gravity air inlet into any building per National Fuel Gas Code ANSI Z223.1/NFPA 54.
- Slope the horizontal vent 1/4" downwards for every 12”.
- Use a condensation drain if necessary.
Vertical Vent Termination

• Terminate at least 6’ from the combustion air intake of any appliance, and 3’ from any other building opening, gas utility meter, service regulator etc.
• Enclose exterior vent systems below the roof line to limit condensation and protect against mechanical failure.
• When the vent penetrates a floor or ceiling and is not running in a fire rated shaft, a firestop and support is required.
• Terminate the vent system at least 3’ above, but not more than 6’ above the roof line, or according to the vent pipe manufacturer’s instructions.
• Provide vertical support every 12’ or as required by the vent pipe manufacturer’s instructions.
• Slope the horizontal vent 1/4” downwards for every 12”.
• Do not vent straight upwards. Always have a horizontal section of venting.
• Install a condensation drain in the horizontal section of the venting.
Combustion Air

Supply combustion air to the units as per the National Fuel Gas Code, ANSI Z223.1.

- Provide two permanent openings to allow circulation of combustion air.
- Make each opening 194 square inches if they provide indoor air, and 100 square inches for outdoor air.
- If the unit is installed in a mechanical closet, provide a 24” clearance in front of the unit to the door.
- If combustion air will be provided through a duct, size the duct to provide 60 cubic feet of fresh air per minute.

Openings supplying indoor air
9. Gas Piping

The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa). The Appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

The appliance and its gas connections must be leak tested before placing the appliance in operation.

In order to choose the proper size for the gas line, consult local codes or the National Fuel Gas Code ANSI Z223.1.

### Gas Pressure

Size the gas line according to total btuh demand of the building and length from the meter or regulator so that the following supply pressures are available even at maximum demand:

- **Natural Gas Supply Pressure**
  - Min. 4" WC
  - Max. 10.5" WC

- **LP Gas Supply Pressure**
  - Min. 8" WC
  - Max. 14" WC

### Gas Meter

Select a gas meter capable of supplying the entire btuh demand of all gas appliances in the building.

### Gas Connection

- Do not use piping with a diameter smaller than the inlet diameter of the water heater.
- Gas flex lines are not recommended unless they are rated for 190,000 btuh.
- Install a gas shutoff valve on the supply line.
- Use only approved gas piping materials.

### Measuring Gas Pressure

In order to check the gas supply pressure to the unit, a tap is provided on the gas inlet. Remove the hex head phillips screw from the tap, and connect a manometer using a silicon tube.

In order to check the gas manifold pressure, a pair of taps are provided on the gas valve inside the unit. The pressure can be checked either by removing the hex head phillips screw and connecting a manometer with a silicon tube, or by removing the 1/8" NPT screw with an allen wrench and connecting the appropriate pressure gauge.

### Sample Gas Line

**Sample Calculation**

1. Size each outlet branch starting from the furthest using the Btuh required and the length from the meter.
2. Size each section of the main line using the length to the furthest outlet and the Btuh required by everything after that section.

**Outlets:**
- Outlet A: 45' (Use 50'), 50,000 Btuh requires 1/2"
- Outlet B: 40', 65,000 Btuh requires 1/2"
- Outlet C: 35', 35,000 Btuh requires 1/2"
- Outlet D: 25', 25,000 Btuh requires 1/2"
- Outlet E: 25' (Use 30'), 190,000 Btuh requires 3/4"

**Sections:**
- Section 1: 150,000 Btuh requires 3/4"
- Section 2: 175,000 Btuh requires 1"
- Section 3: 369,000 Btuh requires 1 1/4"

**Instructions**

1. Size each outlet branch starting from the furthest using the Btuh required and the length from the meter.
2. Size each section of the main line using the length to the furthest outlet and the Btuh required by everything after that section.

**See next page for the pipe capacity charts.**

This appliance suitable for potable water and space heating applications. Do not use this appliance if any part has been underwater. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and gas control which has been under water.

If the water heater is installed in a closed water supply system, such as one having a backflow preventer in the cold water supply line, means shall be provided to control thermal expansion. Contact the water supplier or a local plumbing inspector on how to control this situation.

A pressure relief valve must be installed near the hot water outlet that is rated in accordance with and complying with either The Standard for Relief Valves and Automatic Shutoff Devices for Hot Water Supply Systems, ANSI Z21.22, or The ANSI/ASME Boiler and Pressure Vessel Code, Section IV ( Heating Boilers ). This pressure relief valve must be capable of an hourly Btu rated temperature steam discharge of 190,000 Btuh. Multiple valves may be used. The pressure relief capacity must not exceed 150 psig. No valve shall be placed between the relief valve and the water heater. The relief valve must be installed such that the discharge will be conducted to a suitable place for disposal when relief occurs. No reducing coupling or other restriction may be installed in the discharge line. The discharge line must be installed to allow complete drainage of both the valve and the line. If this unit is installed with a separate storage vessel, the separate vessel must have its own temperature and pressure relief valve. This valve must also comply with The Standard for Relief Valves and Automatic Gas Shutoff Devices for Hot Water Supply Systems, ANSI Z21.22. (in the U.S. only). A temperature relief valve is not required, but if one is used, do not install the valve with the probe directly in the flow of water. This may cause unwarranted discharge of the valve.

Piping and components connected to the water heater shall be suitable for use with potable water. Toxic chemicals, such as those used for boiler treatment, shall not be introduced into the potable water.

A water heater used to supply potable water may not be connected to any heating system or components previously used with a nonpotable water heating appliance.

When water is required in one part of the system at a higher temperature than in the rest of the system, means such as a mixing valve shall be installed to temper the water to reduce the scald hazard.

- Flush water through the pipe to clean out metal powder, sand and dirt before connecting it.
- Take appropriate heat insulation measures (e.g., wrapping with heat insulation materials, using electric heaters) according to the climate of the region to prevent the pipe from freezing.
- Use a union coupling or flexible pipe for connecting the pipes to reduce the force applied to the piping.
- Do not use piping with a diameter smaller than the coupling.
- When feed water pressure is too high, insert a depressurizing valve, or take water hammer prevention measure.
- Avoid using joints as much as possible to keep the piping simple.
- Avoid piping in which an air holdup can occur.
- If installing the unit on a roof:
  - About lower-level hot water supply
    - If the unit is installed on a roof to supply water to the levels below, make sure that the water pressure supplied to the unit does not drop below 29 psi. It may be necessary to install a pump system to ensure that the water pressure is maintained at this level.
    - Check the pressure before putting the unit into operation.
    - Failure to supply the proper pressure to the unit may result in noisy operation, shorter lifetime of the unit, and may cause the unit to shut down frequently.

**Supply water piping**
- Do not use PVC piping.
- Mount a check valve and a shut off valve (near the inlet).
- In order for the client to use the water heater comfortably, 98.1 to 491 kPa (14 to 70 PSI) of pressure is needed from the water supply.
- Be sure to check the water pressure. If the water pressure is low, the water heater cannot perform to its full capability, and may become a source of trouble for the client.

**Drain piping**
- Expansion water may drop from the pressure prevention device and wet the floor. If necessary, provide drain piping or use a drain hose to remove the water.

**Hot water piping**
- Do not use lead or PVC piping.
- The longer the piping, the greater the heat loss. Try to make the piping as short as possible.
- Use mixing valves with low water resistance. Use shower heads with low pressure loss.
- If necessary, use a pump or other means to ensure that the supply water pressure to the inlet of the heater does not fall below 29 PSI when the maximum amount of water is being demanded. Also install a pressure meter on the inlet. If this is not done, local boiling will occur inside the water heater causing abnormal sounds and decreasing the durability of the heat exchanger.
11. Plumbing Applications

Recirculation System

- Cold Water Supply
- NORITZ N-069M N-063S
- Pressure Relief Valve
- Shutoff Valve
- Drain
- Check Valve
- Expansion Tank (Install According to Local Codes)
- Pump Control Signal (See p. 55)
- Check Valve
- NORITZ (N-069M) Relay for Pump > 85 W (See p. 55)
- Pump
- Aquastat (N-063S) (For N-069M, Use Aquastat if Unit Isn't Controlling Pump)
- 8-10 Gal. Storage Tank (To Alleviate Cold Water Sandwich)

Aquastat Wiring

Use Honeywell Aquastat (Model L6006A or L6006C)

Heating System

- Cold Water Supply
- NORITZ N-069M N-063S
- Pressure Relief Valve
- Shutoff Valve
- Drain
- Check Valve
- Expansion Tank (Install According to Local Codes)
- Pump Control Signal (See p. 55)
- Check Valve
- NORITZ (N-069M) Relay for Pump > 85 W (See p. 55)
- Pump
- Aquastat (Use Aquastat if Unit Isn't Controlling Pump)
- Air Scoop (Optional)
- Temp. & Press. Gauge (Optional)
- Heating Controls
- Hydronic Heat Exchanger or Radiant Heat Piping
- Backflow Preventer (Optional)
- Pressure Reducing Valve (Optional)
- Pump (See notes for Sizing)
- Hot Water Return
- Hot Water for Heating
- Mixing Valve
- Tempered Potable Hot Water

For Space Heating Purposes:
If the system requires water for space heating at a higher temperature than for other uses, means such as a mixing valve shall be provided to temper the water for the other uses to help prevent scalding.

N-069M
N-063S

* Size the pump to provide at least 1.58 GPM through the system at 10 Ft of Head plus piping losses. Check the maintenance monitors on the unit to make sure the pump is providing that much flow.
** Adjust the flow using a gate valve and verify the flow rate with the maintenance monitors.
12. Electrical Wiring

Consult a qualified electrician for the electrical work.

Do not connect electrical power to the unit until all electrical wiring has been completed.

This appliance must be electrically grounded in accordance with local codes, or in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70. In Canada, the latest CSA C22.1 Electrical Code.

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

Verify proper operation after servicing.

Field wiring to be performed at time of appliance installation.

Caution

Do not turn on the power until the electrical wiring is finished. This may cause electrical shock or damage to the equipment to occur.

- The electrical supply required by the water heater is 120V AC at 60 Hz.
- The power consumption may be up to 125W or higher if using optional accessories.
- Use an appropriate circuit.

- Do not disconnect the power supply when not in use. When the power is off, the freeze prevention in the water heater will not activate, resulting in possible freezing damage.

- Do not let the power cord contact the gas piping.

Tie the redundant power cord outside the water heater. Putting the redundant length of cord inside the water heater may cause electrical interference and faulty operation.

Ground

- To prevent electrical shock, provide a ground with resistance less than 100 ohms. An electrician should do this work.
- A grounding screw is provided on the back of the junction box lid.

Do not connect the ground to the city water or gas piping. Do not tie the ground to a telephone line.

Breaker Installation

- Mount a device which shuts off the electrical path automatically (leakage breaker) when electrical leakage is detected.

1. Unscrew the junction box lid and open.
2. Push the power cord through the bottom of the unit.
3. Connect the live and neutral wires to the black and white wire in the junction box.
4. Screw the ground wire to the ground screw on the back of the junction box lid and close junction box.
Remote Controller

• Applicable Model

<table>
<thead>
<tr>
<th></th>
<th>Remote controller RC-7646M-2</th>
</tr>
</thead>
<tbody>
<tr>
<td>N-069M, N-063S (option)</td>
<td></td>
</tr>
</tbody>
</table>

Install the remote controller according to the instructions in the Installation Guide (p. 61).

• The N-069M can be programmed so that it will default to one of four temperatures if the remote controller is removed (176, 140, 130, 120°F). To change the default temperature, the remote controller must be initially installed, and removed after programming.

* Changing the default temperature setting:
  1. Within the first ten minutes of connecting electrical power to the unit, but before pressing the Power On/Off button, hit the up [▲] or down [▼] button on the remote controller. This will put the unit into maintenance writer mode. If pressing either of these buttons does not put the unit into maintenance writer mode, unplug the unit for sixty seconds and try again.
  2. The maintenance monitor item number will flash on the display. (the initial item number will be “99”).
  3. The up [▲] and down [▼] buttons can be used to change the maintenance writer item number.
  4. Choose a temperature from the chart below and set the 14 and 15 maintenance writers according to the chart. Pressing the Flow Meter Alarm Set button for 0.5 seconds will switch the indicated item number from “OFF” to “ON” or “ON” to “OFF”. If the Priority lamp is flashing when an item number is displayed, this indicates an “ON” setting for that item number, and if the Priority lamp is off, the item number is off.
  *Do not change the other item numbers. This may cause a fault in the water heater.
  5. After setting the 14 and 15 item numbers for the desired temperature, press and hold the up [▲] and down [▼] buttons together for five seconds to confirm the new settings. The remote controller will emit a tone when the settings are confirmed. If this is not done, the unit will not put the setting changes into effect. After confirming the setting, remove the remote controller to initiate the default temperature setting.

Note: The setting changes can be cancelled by pressing the Power On/Off button before confirming the settings, or if the unit is left alone for ten minutes without confirming the settings. If the default setting needs to be changed again, disconnect the electrical power to the unit, reconnect it and follow this procedure again.

Connecting Remote Controller Cord to Unit

- Keep the remote controller cord away from the freeze prevention heaters in the unit.
- Tie the redundant cord outside the water heater. Do not put the extra length inside the equipment.
- The remote controller cord can be extended up to 300' with 18AWG wire.
- Use a Y type terminal with a resin sleeve. (Without the sleeve, the copper wire may corrode and cause problems).
- Be sure to hand tighten when screwing to the terminal block. Power tools may cause damage to the terminal block.

Remote controller cord

- For extensions, a 26' cord can be purchased (Part # RC-CORD26) or use 18AWG wire.
- Install according to the National Electrical Code and all applicable local codes.

1. Leave enough slack so that the remote controller cord will not be damaged if the unit is removed from the wall.
2. Remove the front cover of the heater (4 screws).
3. Pass the remote controller cord through the wiring throughway and into the unit.
4. Connect the Y terminals at the end of the remote controller cord to the terminal block.
5. Secure the remote controller cord with a clamp.
6. Replace the front cover.

Changing Set Temperature (Not using the remote controller for N-063S).

1. Disconnect power to the heater.
2. Remove the front cover of the heater (4 screws).
   - To set the temperature to 130°F
     Remove the connector with 130°F tag.
   - To set the temperature to 140°F
     Remove the connector with 140°F tag.
3. Replace the front cover of the heater (4 screws).
4. Reconnect power to the heater.
Connecting the pump control wire

1. Leave enough slack so that the pump control wires will stay connected if the unit is removed from the wall.
2. Remove the front cover of the heater (4 screws).
3. Cut off the connector at the end of the pump control wires.
4. Wire the pump control wires through the wiring throughway and connect them to the wiring inside the pump (this will be the power supply for the pump, do not also connect 120 V to the pump). If a large pump is being used (greater than 85 W) use the voltage from these wires as the signal to close a normally open relay through which 120 V will be supplied directly from a wall circuit to the pump.
5. Replace the front cover.

Relay connection with larger pumps (>85 W)

1. Locate and prepare the pump control wires as described above.
2. Choose a suitable installation location for the relay where it will be protected from moisture.
3. Connect the pump control wires from the heater to the signal input on the relay.
4. Cut one of the electrical supply leads and wire it across the open terminals of the relay.
5. Secure all connections and replace the front cover of the heater.
13. Maintenance

Periodically check the following to ensure proper operation of the water heater.

- The venting system must be examined periodically by a qualified service technician to check for any leaks or corrosion.
- The burner flame must be checked periodically for a proper blue color and consistency.
- If the flame does not appear normal, the burner may need to be cleaned.
- If the burner needs to be cleaned, it must be performed by a qualified service technician.
- Do not obstruct the flow of combustion and ventilation air.
- The pressure relief valve must be operated once a year to ensure that it is functioning properly and there is no obstruction. Turn the power off to the unit before opening the relief valve, and make sure that water draining out of the valve will not cause any damage.
- If the relief valve discharges periodically, it may be due to thermal expansion in a closed water system. Contact the water supplier or a local plumbing inspector on how to correct this situation.
- Do not plug the relief valve.
- See Operation Manual for further maintenance.

Warning: There is a scald potential if the output temperature is set too high.

Should overheating occur, or the gas supply fail to shut off, turn off the manual gas control valve to the appliance.

Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

Periodically check and clean the filter inside the cold water inlet of the unit.

14. Trial Operation

The installer should test operate the unit, explain to the customer how to use the unit, and give the owner this manual before leaving the installation.

- Preparation ............
  (1) Open a hot water fixture to confirm that water is available, and then close the fixture.
  (2) Open the gas supply valve.
  (3) Turn on the power supply. Using the remote controller, turn on the Power On/Off button (the Operation lamp will turn on).

(1) Open a hot water fixture and confirm that the Burner On lamp comes on, and that hot water is being produced. (If necessary, repeat until the air in the gas piping is bled out).

* White smoke may be noticed from the exhaust vent during cold weather. However, this is not a malfunction of the unit.
* If an “11” error code appears or a Burner On indicator flashes on the remote controller, turn the unit off and then back on again, and then open a hot water fixture again.

(2) Change the temperature setting on the remote controller and check that the water temperature changes.

- If the water heater does not operate normally, refer to “Troubleshooting” in the Operation Manual.
- After the trial operation, clean the filter in the cold water inlet.

<If installed with a quick connect multi-system>

- Turn the system power ON with the remote controller.
- Slowly open a hot water fixture and check that the units ignite sequentially. Check to see that the hot water temperature is the same as the temperature displayed on the remote controller (*1)

* If both units do not ignite, switch which unit will ignite first by pressing the Max. or Min. Manifold Pressure Set Button on the circuit board (see p. 59). (*2)

Unit A Ignites
Unit B Doesn’t Ignite
Press Max. or Min. Manifold Pressure Set Button on Unit B

Unit A Doesn’t Ignite
Unit B Ignites

* If an 11 or F11 error code flashes on the remote controller, hit the Power Button on the remote controller off and on 2-3 times.
* If (*1) and (*2) cannot be done, the Quick Connect Cord may not be properly connected. Check that the cord is properly connected.
### Caution

**Handling after trial operation**
- If the unit will not be used immediately, close off all gas and water shutoff valves, drain all of the water out of the unit and the plumbing system to prevent the unit and system from freezing, and bleed the gas out of the gas line.
- Freezing is not covered by the warranty.

---

### Lighting Instructions

This water heater does not have a pilot. It is equipped with an ignition device that automatically lights the burner.

1. Do not try to light the burner by hand.
2. Read the safety information in the installation manual or on the front of the water heater.
3. Turn off all electrical power to the unit.
4. Do not attempt to light the burner by hand.
5. Turn the gas control manual valve (external to the unit) clockwise to the off position.
6. Wait five minutes to clear out any gas. If the smell of gas remains, stop, and follow the instructions on page 3 of this manual.
7. Turn the gas control manual valve counterclockwise to the on position.
8. Turn on electric power to the unit.
9. The unit will now operate whenever hot water is called for. If the unit will not operate, follow the shutdown instructions and call a service technician.

---

### Shutdown Instructions

1. Stop any water demand.
2. Turn off electric power.
3. Turn the gas control manual valve clockwise to the off position.

Should overheating occur, or the gas supply fail to shut off, turn off the manual control valve to the appliance.

Connecting Quick Connect Cord

For Quick Connect Multi System Installation use a Quick Connect Cord (sold separately).

**Caution**

The wire coloring on the Quick Connect Cord will not be the same as the wire coloring of the connection plug inside the unit.

* The remote controller can be connected to either unit A or B.

**Connecting the Quick Connect Cord to the two units.**

1. Turn off the power.
2. Remove the front cover of the heater (4 screws).
3. Pass the Quick Connect Cord through the wiring throughway and into the unit.
4. Plug the connector on the Quick Connect Cord to the receptacle inside the unit.
5. Attach the ground wire of the Quick Connect Cord to the terminal block fixing plate.
   (If the ground wire is not attached, electrical noise may cause problems).
6. Secure the Quick Connect Cord with a clamp.
7. Replace the front cover.
Remote Controller RC-7646M-2

Installation Guide

For Installers:
Read this installation guide carefully before carrying out installation.

Note
Do not connect power to the water heater before the remote controller has been properly installed.

Included Parts List

<table>
<thead>
<tr>
<th>Part Name</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Controller</td>
<td>1</td>
</tr>
<tr>
<td>Wall Packing</td>
<td>1</td>
</tr>
<tr>
<td>Phillips Roundhead Wood Screw</td>
<td>2</td>
</tr>
<tr>
<td>Wall Anchor</td>
<td>2</td>
</tr>
</tbody>
</table>

Do not disassemble the remote controller.

Notes on the Installation Location
- The remote should be installed in an easily accessible location.
- Avoid installing in a place where water may splash on the controller.
- Avoid locations where special chemical agents (e.g., benzene, fatty and oily detergents) are used.
- Avoid outdoor installation, or installation in an indoor location where it will be exposed to direct sunlight.

Connection of Remote Controller Cord
- White Connector → To Remote controller
- Y-shaped terminals (two-core) → To Water heater

* Confirm the connection with the labels at both ends of the remote controller cord.
* A 26’ cord can be purchased separately (Part # RC-CORD26).
* The remote controller cord can be extended up to 300 ft. by splicing the cord and using 18 gauge wire to extend the cord to the appropriate length.
Installation

1. Apply Wall Packing to the rear side of the remote controller.
2. Connect the remote controller wires to the separate remote controller cord.
3. Remove the cover of the remote control, mark the location of the screw holes, and drill holes for the wall anchors.
4. Insert the wall anchors, screw the remote control to the wall and replace the cover.
Installing the Remote Controller Outdoor Junction Box

1. Insert the remote controller wires through the wall pipe and secure the wall pipe to the remote controller. Locate the remote controller wall packing, slide it over the pipe and wires, and apply it to the rear side of the remote.

2. Drill a 1-1/4” hole in the wall where the remote controller will be installed.

   * Do not install the remote controller in a location that is exposed to moisture, direct sunlight, or chemical agents. These can damage the remote controller.

3. Insert the wall pipe containing the remote controller wires through the hole.

4. Slide the junction box packing and the junction box over the remote controller wires and wall pipe protruding from the outside wall.

5. Slide the box nut over the remote controller wires and screw it onto the wall pipe.

6. Connect the remote controller wires to the separate remote controller cord inside the box. Wind the excess remote controller wire on the provided hooks as illustrated below.

7. Close the junction box.

Made in JAPAN NR99 ++++
FOR YOUR SAFETY READ BEFORE OPERATING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This water heater does not have a pilot. It is equipped with an ignition device that automatically lights the burner. Do not try to light the burner by hand.

B. BEFORE OPERATING smell all around the water heater area for evidence of leaking gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS.
- Do not try to light any appliance.
- Do not touch any electric switch, do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to turn the gas valve knob. Never use tools. If the knob will not turn by hand, don’t try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire of explosion.

D. Do not use this water heater if any part has been under water. Immediately call a qualified service technician to inspect the water heater and to replace any damaged parts.
OPERATING INSTRUCTIONS

1. STOP! Read the safety information above.
2. Turn off all electric power to the appliance.
3. Do not attempt to light the burner by hand.
4. Turn the gas control manual valve (installed on the gas supply line external to the unit) clockwise to the position.
5. Wait five (5) minutes to clear out any gas. If you then smell gas, STOP! Follow "B" in the safety information above on this label. If you don’t smell gas, go to the next step.
6. Turn the gas control manual valve (installed on the gas supply line external to the unit) counterclockwise to the full ON position.
7. Turn on all the electric power to the appliance.
8. If the appliance will not operate, follow the instructions “To Turn Off Gas To Appliance” and call your service technician or gas supplier.

TO TURN OFF GAS TO APPLIANCE

1. Turn off all electric power to the appliance if service is to be performed.
2. Turn the gas control manual valve (installed on the gas supply line external to the unit) clockwise to the full OFF position.

DANGER

Vapors from flammable liquids will explode and catch fire causing death or severe burns.
Do not use or store flammable products such as gasoline, solvents or adhesives in the same room or area near the water heater.

Keep flammable products:
1. Far away from heater.
2. In approved containers.
3. Tightly closed
4. Out of children’s reach

Vapors:
1. Cannot be seen
2. Vapors are heavier than air
3. Go a long way on the floor
4. Can be carried from other rooms to the main burner by air currents.

DANGER

Hot Water Heater temperature over 125 °F can cause severe burns instantly or death from scalding.
Children, disabled and elderly are at the highest risk of being scalded.
Feel water temperature before bathing or showering.
Temperature limiting valves are available, ask professional person.

WARNING: California Proposition 65 lists chemical substances known to the state to cause cancer, birth defects, death, serious illness or other reproductive harm. This product may contain such substances, be their origin from fuel combustion (gas, oil) or components of the product itself.

A temperature and pressure relief valve listed as complying with the standard for Relief Valve and Automatic Gas Shutoff Devices for Hot Water Supply System, ANSI Z21.22, shall be installed at the time of installation of the heater in the location specified by the manufacturer. Local codes shall govern the installation of relief devices for safety operation of the water heater. The relief valve must not be removed or plugged.
